FST21 EXPANDS WITH THE OPENING OF A NEW OFFICE IN BRAZIL

Southborough, Massachusetts . . . April, 2013

FST21, a leading technology company specializing in the field of automation and security, has recently expanded its operation with the opening of a new office in Brazil.

The new location is based in São Paulo, Brazil's largest city, and also the largest city proper in the southern hemisphere and Americas. The office is staffed by eight administrative, sales and technical personnel who serve FST21's growing customer base in South America.

"Brazil has experienced a substantial growth in past years and continues to do so," notes Daniel McQuoid, Managing Partner for FST21 Brazil. He points out that Brazil will be hosting three world-class events - the Confederations Cup 2013, World Cup 2014, and Olympics in 2016 - in the next four years. "This will generate a great demand for new technologies such as those FST21 brings to market to reinforce security and access control."

"FST21 is growing at a rapid rate," adds Major General Aharon Zeevi Farkash, CEO of FST21. "Our innovative In Motion Identification™ capabilities in general, and our SafeRise® access control software in particular, are sought after solutions across the globe," he adds. "We are pleased to now serve our South American customers from our new, state-of-the-art Brazilian office facility."

For details and complete information, please visit FST21's new website serving South America at www.fst21.com.br.

About FST21:

FST21's *In Motion Identification™* uses a fusion of biometric and analytic technologies that include facial recognition, behavior analysis, speech recognition, voice recognition, LPR and

more. FST21 is changing the access control world, partnering with global and local system integrators who resell and install the SafeRise® systems as well as with OEM partners, in North America, LATAM and APAC. Customers include residential high-rises, commercial buildings, housing authorities, police, military, border control and other Homeland Security agencies, as well as security authorities at municipalities, airports, railways, sea and other transportation authorities.

The FST21 R&D team of professionals has substantial technology experience acquired in an array of inter-disciplinary development roles with leading multinational and high-tech companies and during their military service. At FST21, they have the exciting challenge of forming the future of intelligent building safety and security solutions based on a fusion of 2nd generation video/voice biometrics & analytics. Founded in 2007 by Major (Res.) General Aharon Zeevi Farkash, a world expert in security, FST21 is a privately-held company. It is headquartered in Rishon Lezion, Israel and maintains a U.S. office in Massachusetts.
