### **FST21 WELCOMES ITS NEW BABY - SAFEI™**

*February, 2014 . . . Parlin, NJ*

FST21, a leading technology company specializing in the field of identification and security, is pleased to announce the arrival of SafeI™, a fully integrated access control controller that delivers the most advanced, secure and convenient In Motion Identification access control on the market.

SafeI™ enables the groundbreaking technological advantages of FST21's SafeRise® solution (an In Motion Identification system that allows approved users access through a fusion of biometric recognition, voice and license plate recognition), in a more compact version of the SafeRise server and is designed to support one In Motion Identification access point. SafeI™ comes in a standalone plug and play enclosure, and is the driving force behind FST21's Digital Doorman™ all-in-one In Motion Identification™ Access Control solution. No keys, cards or codes are required.

Incorporating the SafeRise® technology with dedicated hardware and seamless plug and play installation, the SafeI™ can be easily installed in any secured location. All peripheral devices - from the electronic door lock and door positioning switch to the recognition camera, RFID reader, intercom and feedback signaling device - connect directly to the SafeI™. Authorized entry is granted instantly and simply by walking to the access point.

"After seeing a demo of SafeI, and witnessing firsthand its simplicity and ease of installation, I am very excited to make this latest access control breakthrough from FST21 available to my clients," says Barak Belkin, CEO of OMD, Inc., a leading designer and installer of quality security systems based in Los Angeles. "This more compact version of the SafeRise server is ideal for securing a single access point and delivers the same high level of convenient security I've come to count on from FST21".

**About FST21:**

FST21's solutions provide a new paradigm called Convenient-Security by using In Motion Identification™ based on fusion of biometrics and analytics information. In FST21's new paradigm, no keys, cards or codes are needed - you are the key! Authorized entry is granted instantly and simply by walking to the access point. FST21's SafeRise® solution provides top security and convenience by fusion of real time biometric information for fast and automatic access management.

The FST21 R&D team of professionals has substantial technology experience acquired in an array of inter-disciplinary development roles with leading multinational & high-tech companies and during their military service. FST21 has the exciting challenge of forming the future of intelligent building safety and security solutions based on a fusion of 2nd generation video/voice biometrics & analytics. FST21 was founded in 2007 by Major General Aharon Zeevi Farkash, a world expert in security, and has an experienced management team all with successful backgrounds. FST21 is a privately-held company headquartered in Rishon Lezion, Israel, with offices in the United States, Canada, Brazil, Hong Kong, Vietnam and Russia.
