## **WORLD'S LARGEST DIAMOND EXCHANGE SELECTS FST BIOMETRICS SECURE IDENTIFICATION ACCESS SOLUTION FOR NEW FACILITY**

*Israel Diamond Exchange Deploys Pioneering In Motion Technology for Ultimate Security and Mobility for Staff and Visitors to New Polishing House*

RISHON LEZION, Israel (June 23, 2015) – [FST Biometrics](#), the leading biometric identification solutions provider, today announced its cutting-edge secure access solution has been deployed by the [Israel Diamond Exchange](#) (IDE) at the entry point of its new polishing house.

FST's award-winning In Motion Identification (IMID) technology combines a unique fusion of facial recognition and body behavior biometric analytics technologies. Providing a non-invasive and highly secure system, in motion access guarantees security for the permanent staff and hundreds of frequent visitors to IDE's polishing house – while allowing them hands-free, hassle-free entry.

“We are delighted to have been selected by the Israel Diamond Exchange to service the secure access needs of its new state-of-the-art facility,” said Arie Melamed Yekel, CMO of FST Biometrics. “FST's IMID Access is perfectly suited to provide the polishing house with critical security, without impeding the speed of operations.”

Located outside of the IDE's main campus, the polishing house requires an access solution that guarantees security for the diamonds it processes daily – worth millions of dollars – without impacting the access speed of hundreds of staff and visitors. FST was selected after completing a rigorous trial period, in which the company's IMID Access

successfully passed all testing, and was subsequently piloted at the world-renowned International Diamond Week, hosted by the IDE in April 2014.

“Serving as a trading center for a high volume of diamonds, the Israel Diamond Exchange demands the highest level of security without slowing down operations,” said Israel Vantosovski, Director of Security for the Israel Diamond Exchange. “Having experienced the technology in action, we are confident that FST Biometrics’ IMID Access is the most secure and effective solution available.”

###

FST Biometrics is a leading identity management solutions provider. The company’s IMID™ product line offers access control through its proprietary In Motion Identification technology. This provides the ultimate security and convenience for users, who are accurately identified without having to stop or slow down. IMID™ solutions integrate a fusion of biometric and analytic technologies that include face recognition, body behavior analytics and voice recognition.
