

FOR IMMEDIATE RELEASE

FST BIOMETRICS LAUNCHES NEW VERSION OF IMID ACCESS WITH ENHANCED USER AND ADMIN EXPERIENCE

*New Benefits of Version 3.0.7 Include Self-Enrollment for Users and
Integration with Software House C-Cure Access Control System*

RISHON LEZION, ISRAEL (October 28, 2015) – [FST Biometrics](#), the leading biometric identification solutions provider, today announced the release of IMID Access version 3.0.7. Enhancements added to the product will result in easier administration of the system and improve the product's user experience.

Realizing FST Biometrics' vision of providing secure access that does not interfere with the pace of life, IMID Access 3.0.7 features IMID Cast, which allows users more self-reliance and decreases the need for administrative and technical support. IMID Cast includes a self-enrollment station, offering quick and independent enrollment to new users, and a feedback tablet that shortens entry time for users.

The self-enrollment process allows new users to create their own biometric profile and immediately activate it, which permits use of the system without any waiting period. This action can be performed without any assistance or supervision from a system administrator.

Feedback tablets situated next to access points provide users with real-time feedback from the system that shorten the learning curve of new users and enhances the overall users' experience.

"This release demonstrates our conviction that advanced security systems should work for the user, and not the other way around," said Ilan Krugliak, Product Manager of FST

Biometrics. “The increased capabilities of IMID Access 3.0.7 continue to provide an unparalleled level of security. But just as importantly, the new version of the IMID system increases user self-reliance, creating a better experience both for the users accessing facilities on a daily basis and the staff managing the access control of the location. Our goal at FST Biometrics is for our technology to facilitate access, with effective security in place behind the scenes.”

Additional enhancements of IMID Access 3.0.7 include integration with the Software House C-Cure access control system. Integration with the C-Cure infrastructure is seamless and will maintain network architecture, system configurations, and access-level settings.

The In Motion Identification (IMID) solution integrates a fusion of facial recognition and body behavior biometric analytics technologies. FST Biometrics provides security while enabling hands-free, hassle-free entry through secure access points – without impeding the flow of authorized users.

###

FST Biometrics is a leading identity management solutions provider. The company’s IMID™ product line offers access control through its proprietary In Motion Identification technology. This provides the ultimate security and convenience for users, who are accurately identified without having to stop or slow down. IMID™ solutions integrate a fusion of biometric and analytic technologies that include face recognition, body behavior analytics and voice verification.
